

Music Website Project Proposal

The proposed website shall be used to share and host music and playlists. The site should contain a library of songs of different categories where users will be able to gather information about various artists, albums, and tracks. The website may also contain review and rating sections, allowing users to interact with the website by giving their comments and reviews regarding the music. An important aspect of the site is its ability to create playlists with songs inside. This website is made to provide an informative and entertaining place for all lovers of music.

Proposed Pages:

- Home
- About Us
- Artists
- Albums
- Reviews
- Contact Us

Overview Data Administration:

On this website, there will be management and storage of data about music. The data would include artist profiles, album details, songs, reviews, genres, and ratings. Users will be able to browse/search the music database to access details about certain songs. Also, the system will support the functionality for registered users to create playlists that can be shared. User accounts will be secured by login credentials, and profiles.
